WOOLY BOARD

A hardwood fully adjustable frame for blocking sweaters. Independent adjustment for waist, shoulder, arms and neck. Waist: 12" - 62"; Shoulder: 24" - 62"; Arm: 19" - 25" x 4" - 24" diameter. All hardware stainless steel.

PARTS

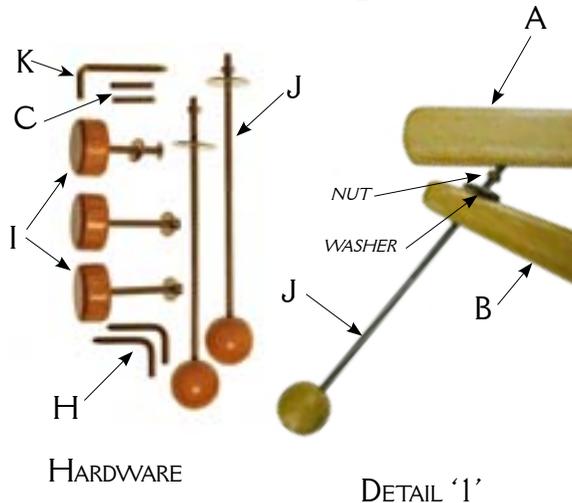

- A - (2) TOP BEAMS
- B - (2) ARM BEAMS (1 Right and 1 Left) with
- C - (2) CONNECTING PINS
- D - (2) POSTS
- E - (2) BASE BARS
- F - (1) BASE SUPPORT
- G - (2) NECK BARS with
- H - HOLDING PINS
- I - (3) KNOB SETS (1 with PHILLIPS HEAD SCREW, 2 with SOCKET HEAD SCREWS, WASHER and threaded KNOB)
- J - (2) ARM ADJUSTMENT PINS with large WASHER and NUT
- K - WRENCH

ASSEMBLY

Set up Wooly Board to desired sweater size prior to washing sweater and note location of CONNECTING PIN "C" which connects ARM BEAM "B" to POST "D".

1. Place the (2) BASE BARS "E" together, flat side to flat side, with the large holes facing up. Secure together with the PHILLIPS Head SCREW KNOB SET "I", placing Washer on Screw, placing Screw through the slots, and then securing with KNOB.

Note: Knob Sets "I" should be hand tightened and not over tightened.

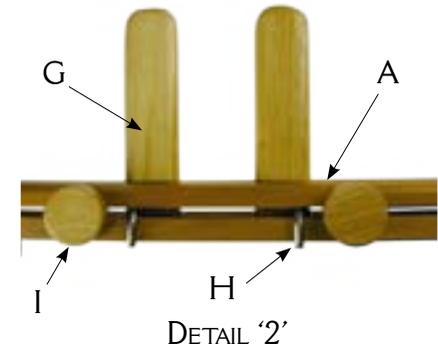

HARDWARE

DETAIL '1'

2. Set BASE SUPPORT "F" over the end of either of the BASE BARS "E" adjacent to the Post hole. This will allow pivoting of the POST "D"/BAR "E" as required.

3. Place a POST "D" in each of the BASE BEAM "E" holes with the holes in the post facing forward. This should be a secure fit.

4. Place the (2) TOP BEAMS "A" together, steel pins facing downward and secure with the (2) SOCKET HEAD SCREW KNOB SETS "I" 3"-4" apart, centered within the neck area. Place WASHER on SCREW, then place SCREW through the slots, and then loosely secure with KNOB. Spread these bars apart so the distance between the pins is approximately the same as the distance between the posts. Place the assembled TOP BEAM through both arms of the sweater. Lower this assembly over the POSTS "D", setting the Pins in the BEAMS "A" into the top holes of the POSTS "D". This is a very loose fit, allowing the Posts to pivot on these pins.

DETAIL '2'

Loosen the three KNOB SETS "I" and adjust the top and bottom POST spacing as desired for the width and shape of the sweater. All KNOB SETS can now be tightened using the WRENCH.

6. Prepare each ARM BEAM "B" by inserting the steel CONNECTING PIN "C" into one of the holes in the side of this beam. Hole is determined by Arm Length which is measured from front hole in this beam. Now place each ARM BEAM "B", in turn, through a sleeve, the CONNECTING PIN "C" facing toward the POST. Place PIN into the appropriate hole in POST "D" to accommodate the sleeve.

7. Insert ARM ADJUSTMENT PIN "J" through end hole at outer end of BEAM. Place the large WASHER on the PIN and then the NUT, placing the NUT approximately 1/2" from the end of this PIN. *Note: This nut serves only to keep the pin from falling free of the ARM BEAM. This assembly need not be removed once in place.*

8. Push the ADJUSTMENT PIN "J" up so the end of the PIN falls within the notch in the bottom of the TOP BEAM. Push the ARM BEAM down, adjusting it to the desired cuff size. Let the large WASHER drop down, and tilt, catching the threads in the rod and securing the selected position. To release, simply raise the lower end of the WASHER so it can slide on the PIN.

Note: To set the arm beam without a sweater in place, you can put a large rubber band around the Top Beam and Arm Beam to establish the tension that the sweater would ordinarily supply.

9. For high neck sweaters, place the (2) NECK BARS "G" on the TOP BEAMS "A" by loosening the KNOB SETS "I" and setting the thin tongue of these BARS between the overlapping TOP BEAMS so the holding hole in these pieces is on the outer edge. Place the HOLDING PINS "H" through the slot in the TOP BEAM and the Hole in the NECK BAR "G". Spread the Neck Bars as required.

10. When sweater is dry, remove the ARM BEAMS "B" by removing the pin end from the POSTS and pull out through the sleeve. Lift the TOP BEAM "A", with sweater, off the Posts, and draw the TOP BEAM out of the sweater.

Note: To move or carry assembled WOOLY BOARD, pick it up by the 2 POSTS below the ARM BEAMS.
